Modules

Alex Thalhammer

Modules

- Learn how to structure an Angular app with Modules
- Know how to use them in your projects
- Deprecated?

Current AppModule

```
@NgModule({  
  imports: [  
    BrowserModule, HttpClientModule, FormsModule  
  ],  
  declarations: [  
    AppComponent,  
    FlightSearchComponent,  
    CityPipe  
  ],  
  bootstrap: [  
    AppComponent  
  ]  
})  
export class AppModule {}
```

Typical module structure

SharedModule

```
@NgModule({  
  imports: [  
    CommonModule  
  ],  
  declarations: [  
    CityPipe  
  ],  
  exports: [  
    CityPipe  
  ]  
})  
export class SharedModule {}
```

declarations have to be exported to be used in other Modules!

FlightBookingModule (Feature Module)

```
@NgModule({  
  imports: [  
    CommonModule, FormsModule, SharedModule  
  ],  
  declarations: [  
    FlightSearchComponent  
  ],  
  exports: [  
    FlightSearchComponent ←----- Everything we want to use in other modules!  
  ]  
})  
export class FlightBookingModule {}
```

AppModule (Root Module)

```
@NgModule({  
  imports: [  
    BrowserModule, HttpClientModule, FlightBookingModule  
  ],  
  declarations: [  
    AppComponent  
  ],  
  bootstrap: [  
    AppComponent  
  ]  
})  
export class AppModule {}
```

Trick: Re-exporting of modules

```
@NgModule({  
  imports: [  
    CommonModule, FormsModule  
  ],  
  declarations: [  
    CityPipe  
  ],  
  exports: [  
    CityPipe, FormsModule  
  ]  
})  
export class SharedModule {}
```

Use it here and in the modules that import this module

A diagram consisting of two red dashed arrows. The first arrow originates from the **FormsModule** entry in the `imports` array of the `@NgModule` decorator and points towards the explanatory text. The second arrow originates from the `FormsModule` entry in the `exports` array and also points towards the same text.
